2.7L Mahindra Installation Instructions

- 1) On the drivers side, under the hood, locate the fuel sensor connector and the 4 injector connectors

2) The fuel sensor connector is a 3 pin connector located on the driver side of the engine at the end of the fuel rail. Press the release tab on top of the connector, and pull it straight out. Plug the Ag Diesel Solutions male connector into the female stock connector. Plug the male stock connector into the Ag Diesel Solutions harness.

3) Looking directly over the top of the engine locate and unplug the 4 individual injector connectors. You will want to start at the back of the engine (firewall side) with injector connector "A" and work your way toward the engine fan ending with injector connector "D".

4) Plug the Ag Diesel Solutions male connector into the female stock injector. Plug the male stock connector into the Ag Diesel Solutions harness.

5) Run the power and ground leads directly to the battery.

6) Mount the module with the connector on the bottom side, as to reduce the chance of moisture from getting into the module harness. Keep away from excessive heat and moving parts. **Note: Zip tie onto the factory computer wire harness works well. Mounting the module as shown will help prevent moisture from collecting into the module connector.**
